

Skin cancer treatment guide

Non-melanoma skin cancers and field cancerisation

Consider radiation therapy for non-melanoma skin cancers

Advances in technology have enabled new radiation therapy techniques to be developed, allowing patients to be treated with greater precision and accuracy than ever before.

- Treatment is delivered with curative intent
- Treatment of large areas (fields) of skin is possible
- Treatment is affordable and GenesisCare will be sympathetic to all patient financial circumstances
- We treat all patients, publicly or privately referred

Patient eligibility

- Non-melanoma skin cancer
- Ability to lie flat for approximately 15 minutes for multiple treatment sessions
